

1      ABSTRACT OF THE DISCLOSURE

A communication support system includes  
a command signal recognition unit which discretely  
detects a command signal sent by a telephone unit and  
5      a command signal sent from a telephone network, and  
determines whether the command signal is from the  
telephone unit, the command signal from the telephone  
unit indicating one of a plurality of telephone  
services of a data processing device. A signal  
10     transmission inhibition unit inhibits transmission of  
a signal from the telephone unit to the telephone  
network. A telephone service processing unit performs  
a telephone service processing of the data processing  
device for the telephone service indicated by the  
15     command signal from the telephone unit, the telephone  
service processing unit starting execution of the  
telephone service processing when the command signal  
recognition unit determines that the command signal is  
from the telephone unit.
